Transfer of responsibility of Covimat product range to proRheo

Purchased in 1995 from Mettler Toledo, the Covimat product range has been part of the density and viscosity portfolio for many years. Following a review of its business strategy, Micro Motion Slough is rationalising the viscosity portfolio and focussing purely on its fork viscometer business. One part of this process is the transfer of the Covimat product range – and its spares - to an existing Emerson approved distributor, proRheo.

proRheo is a German based company that has been distributing the product for a number of years and has its own range of rotational laboratory viscometers. The company's founders include Lothar Gehm who is an internationally renowned expert on Viscosity measurement, and is the original designer of the Covimat when he worked for Contraves.

As part of this agreement between Micro Motion Slough and proRheo, effective as of 11th December 2008, proRheo will become the sole supplier of all Covimat products and spares and will support any queries on Covimat products still within their warranty period.

All future enquiries concerning the Covimat or its spare parts should be sent direct to proRheo (contact details below).

Should there be any need for further clarification concerning the transfer of the Covimat product range to proRheo then please do not hesitate to contact Micro Motion Slough Sales & Marketing.
